

GENERAL MACHINERY & EQUIPMENTS

Transporting **large and heavy machinery** demands robust, efficient, and carefully engineered packaging. These machines are often heavy and involve high-value components that require protection from mechanical stress, corrosion, and environmental conditions during transit and storage.

Our packaging solutions are **specifically designed** to address these challenges, ensuring machinery arrives in pristine condition, ready for deployment.

Modular Structures for Versatility:

Packaging solutions are designed with modular components, allowing for flexible configurations that accommodate disassembled or irregularly shaped machinery parts.

Integrated Lifting and Securing Features:

Includes built-in lifting points, straps, or slots for forklifts and cranes, ensuring safe and efficient handling during transportation.

Multi-Layered Protection:

Incorporates layered packaging such as corrugated panels combined with reinforced ply, foam linings, and protective films for superior safeguarding against shocks and abrasions.

ODC Cargo:

Machines & Equipments are often large and hence require specialised packaging to sustain handling and transportation.
